

MU Connection Guide

MU Secure Wifi

MU Secure is our campus-wide WPA2-Enterprise wifi that uses your Marian username and password to authenticate and connect. MU Secure will work with most devices that you will need to connect while on campus. Examples of devices that you can connect to MU Secure:

- Mobile Devices (cell phone and tablets)
- Laptops\MacBooks
- Chromebooks

MU Media

MU Media is our campus media wifi network that uses WPA2-Personal Pre-Shared keys (PSKs) to connect. MU Media is not available campus-wide and is used primarily in residence halls. MU Media is designed for devices that do not support WPA2-Enterprise authentication such as the following devices:

- Gaming devices (Xbox and Playstation)
- Smart TV's
- Wireless Printers
- Streaming devices (Apple TV, Roku, FireTV)

Media keys must be requested through the IT Department and can support up to three devices simultaneously. To request a Media key go to the IT Helpdesk web page to complete the *Media Key Request* form and submit it.

Port Activation

In addition to wireless connections Marian University also provides physical wired connections to supplement internet connectivity. Wired connections are limited to the number of physical ports in a room and must be requested via the Port Activation Request Form on the IT Helpdesk web page. Port Activations are tied to specific devices and must be requested **per device** with a maximum of 3 devices. Ethernet ports can be used for any device that has an Ethernet port.

You may request an Ethernet cable for port use from your Resident Director (RD).

To access the form go to the IT Helpdesk web page to complete and submit the form.

<http://www.marian.edu/current-students/information-technology/helpdesk>

When submitting the form include the all devices that will be connected. For wired connections also include the MAC address of the device(s) to be connected as well.

If you have any question please contact the Helpdesk @ 317-955-644
